ANDROID SENSOR PROGRAMMING:

MIT App Inventor-2 is an online platform to build applications for android. It provides a block-based programming medium for easy access to various sensors that an android phone provides.

AIM:

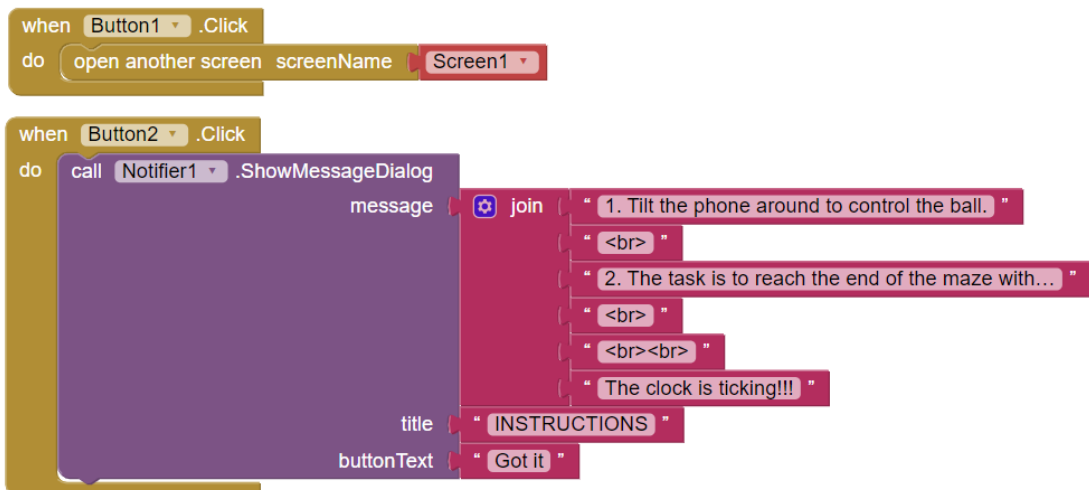

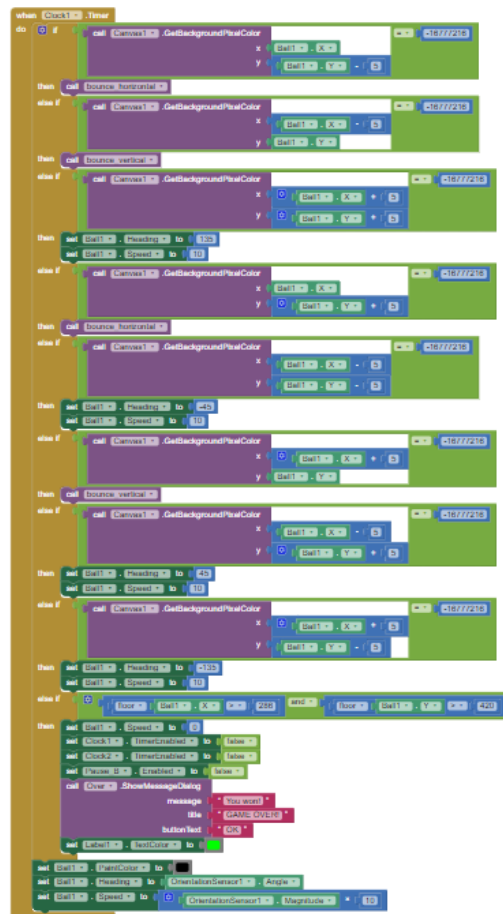

- Design a simple maze game which employs the use of android's orientation sensor.

Components Required:

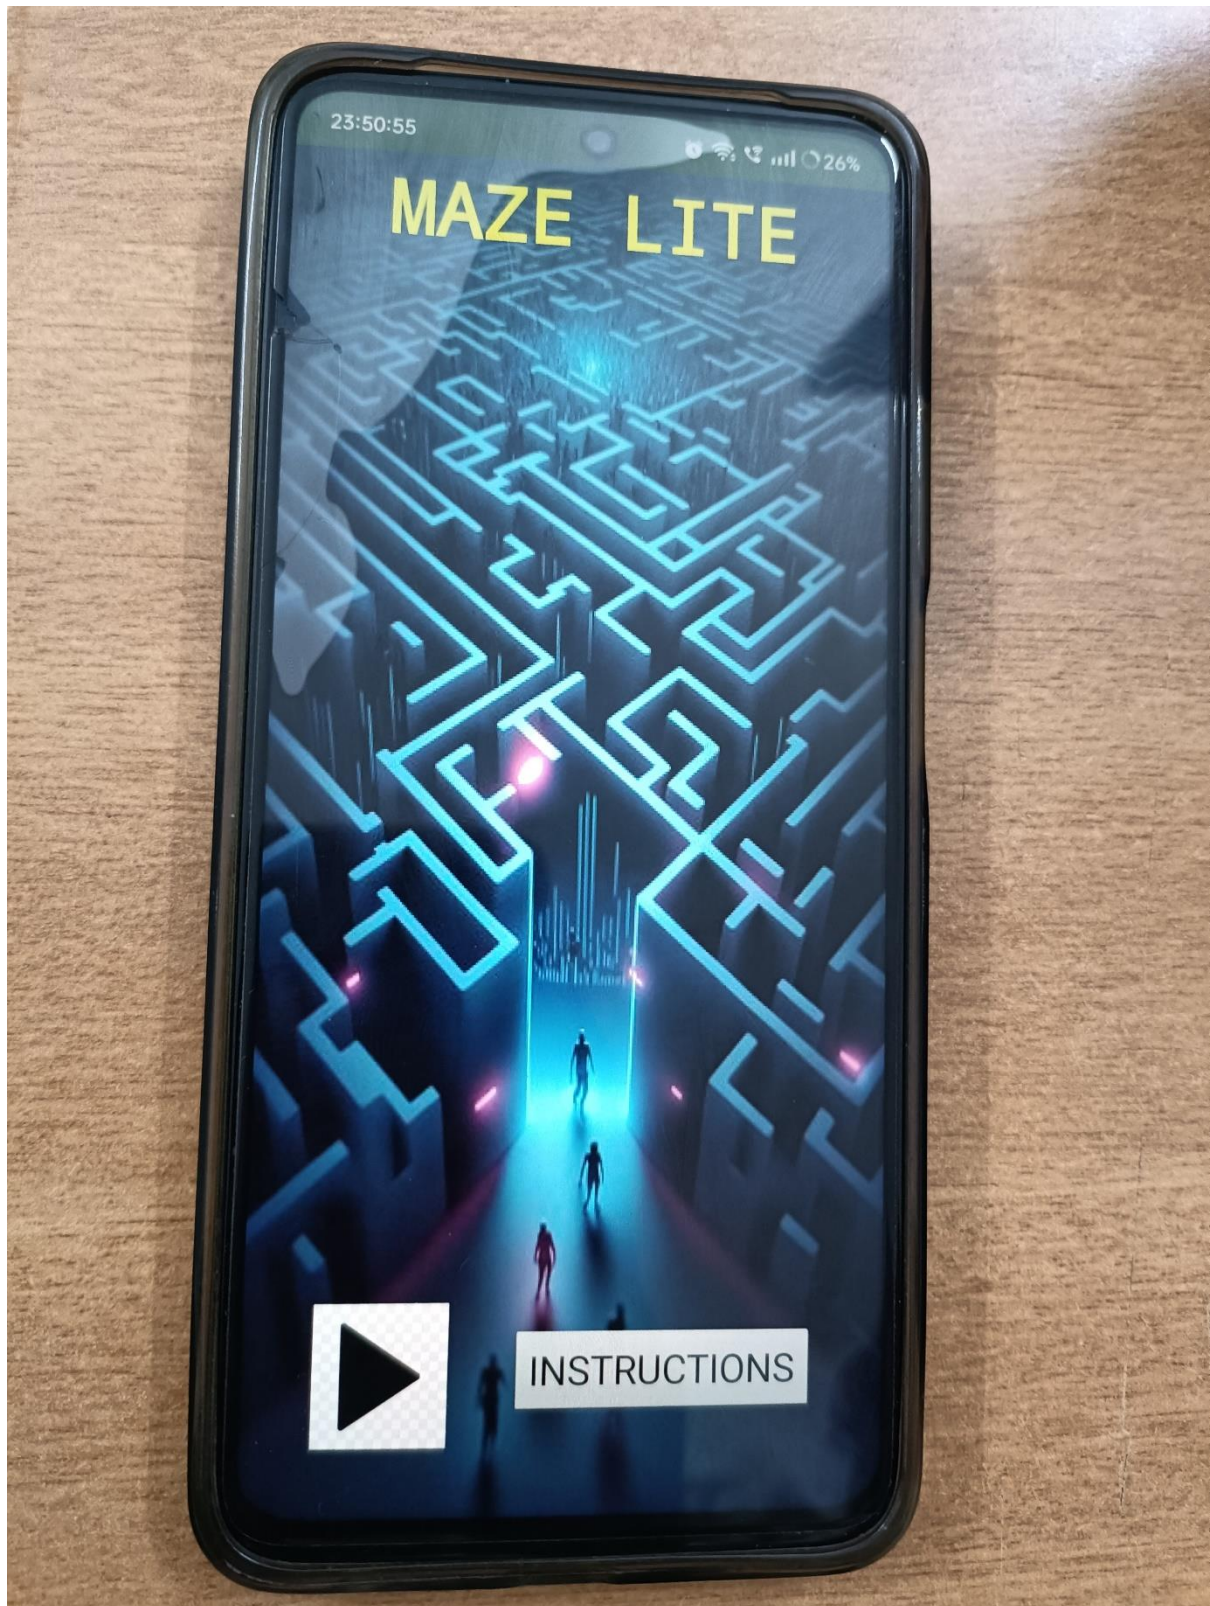

- Android Smartphone (5+)
- Laptop with internet access

Procedure:

- Follow the instructions to connect the smartphone to the laptop via the appinventor companion application.
- Use the code blocks shown.
- Test the game app.

Results:

Observation: The game used the following 2 main sensors:

1. Orientation sensor
2. Clock

In addition, it uses the android's touch interface. The game is only for prototyping and educational purposes.

Conclusion: The game worked as intended.
